## How to run the executable on Linux?

We hope you have downloaded the executable from the portal before opening this document.

Once the executable has finished downloading, follow the below instructions to get it up and running on your machine.

Locate the executable, and launch the Terminal.

## How to run the executable on Linux?

Move to the directory where the executable is located, grant it appropriate permissions, i.e. `chmod a+x executable`, then run `./executable` where `executable` is the executable name, for example `1-linux`. You have successfully run the executable.
