## How to run the executable on Linux?

We hope you have downloaded the executable from the portal before opening this document.

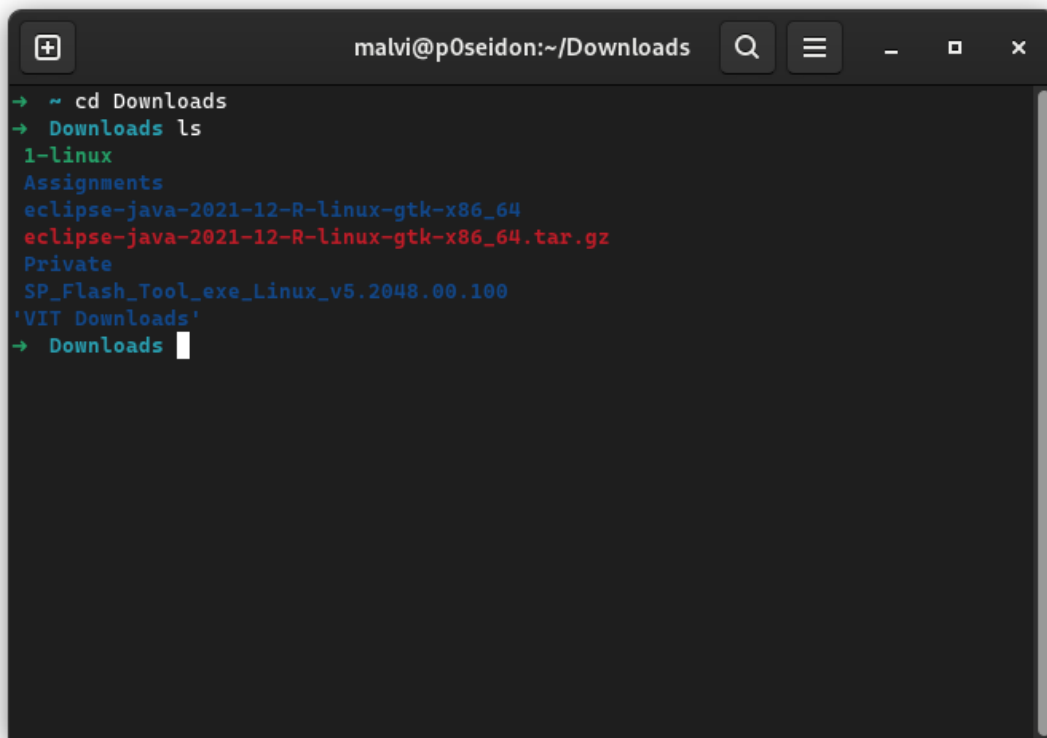

Once the executable has finished downloading, follow the below instructions to get it up and running on your machine.

Locate the executable, and launch the Terminal.

## How to run the executable on Linux?

```
malvi@p0seidon:~/Downloads
→ ~ cd Downloads
→ Downloads ls
1-linux
Assignments
eclipse-java-2021-12-R-linux-gtk-x86_64
eclipse-java-2021-12-R-linux-gtk-x86_64.tar.gz
Private
SP_Flash_Tool_exe_Linux_v5.2048.00.100
'VIT Downloads'
→ Downloads
```

Move to the directory where the executable is located, and then run `./executable` where `executable` is the executable name, for example `1-linux`. You have successfully run the executable.

```
malvi@p0seidon:~/Downloads
→ Downloads ./1-linux
5
Hello World
Hello World
Hello World
Hello World
Hello World
→ Downloads
```
